### INTRODUCTION

Unstable pelvic fractures combined with acetabular fractures are a complex and challenging injury with the rapid growth of industries. when an injury occurs to the anterior pelvic ring, a fracture of the pubic branch involving the low anterior wall of the acetabulum is often considered to be a simple pelvic ring injury; Only pelvic ring injuries that require surgical intervention independent of that needed to achieve acetabular fracture fixation can be considered combined injuries. Patients with combined pelvic and acetabular injuries that are not well treated are prone to a poor prognosis of chronic sacrococcygeal pain, bilateral lower limb inequality, traumatic arthritis of the hip and femoral head necrosis.
