**In view of founders
centennial celebration**

We cordially invite for

**“World Immunization week” Celebration
April 24th-30th**

Theme – 2025

**“IMMUNIZATION for All is Humanly
Possible”**

**Organized by
Department of Paediatrics**

About the program

“Global immunization programs are crucial public health initiatives aimed at preventing infectious diseases through vaccination, impacting the health and well-being of individuals and communities worldwide. These programs have significantly reduced disease prevalence and mortality. Over the last 50 years, essential vaccines have saved at least **154 million lives**.

In these 50 years, vaccination accounts for 40% of the improvement in infant survival, and more children now live to see their first birthday and beyond than at any other time in human history. The future of immunization means not only reaching millions of children who have never received a single shot, but protecting grandparents from influenza, pregnant mothers from tetanus, and young girls from HPV.

Under the banner, ‘Immunization for All is Humanly Possible’, World Immunization Week 2025 aims to ensure even more children, adolescents, adults – and their communities – are protected against vaccine-preventable diseases.

It’s time to show the world that **“Immunization for All is Humanly Possible”**.
