We cordially invite you all to a State Level CME and WORKSHOP on RECENT ADVANCES IN ORTHOBIOLIGICS

On

26/09/2025 from 9AM TO 4PM

Venue: LIBRARY AV HALL

Organized by

Dept. of ORTHOPAEDICS

under the
aegis of
KOA and BOS

INTRODUCTION

Orthobiologics are biological substances and therapies, such as platelet-rich plasma (PRP), stem cells, Platelet rich fibrin (PRF), Bone Marrow Aspirate Concentrate (BMAC) etc, used in orthopaedics to enhance the natural healing process of musculoskeletal injuries like fractures, ligament tears, and osteoarthritis. These treatments leverage the body's own cells and growth factors to accelerate healing and regeneration, offering a minimally invasive alternative or complement to surgery.

What are orthobiologics?

Biological substances:

They are natural materials derived from the patient's own body (autologous) or from a donor (allogeneic).

Purpose:

To speed up the healing of bone and soft tissue injuries by delivering concentrated growth factors, cells, or other healing components to the injured area.

Common types of orthobiologics:

- Platelet-Rich Plasma (PRP)
- Bone Marrow Aspirate Concentrate (BMAC)
- Adipose-derived products
- Extracellular Matrix (ECM) products
- Platelet rich fibrin (PRF)
- Growth factor concentration (GFC)
- Autologous Conditioned Serum (ACS)

GUEST SPEAKERS

Dr. Sathish Kumar

Thangamani
