**WILLIAM OSLER HALL
SDUMC, TAMAKA, KOLAR**

REGISTRATION FEE: Rs. 200/-

Infertility affects 10-15 % of couples. Male factor alone contributes to 20-30% of cases. Management of male infertility depends on underlying cause and severity of sperm abnormalities. IUI plays an important role in management of mild to moderate male factor infertility especially in ejaculatory dysfunction, cervical factor infertility and unexplained infertility. IUI procedure is minimally invasive and cost effective with minimal infrastructure requirement when compared with IVF and ICSI. IUI reduces financial and emotional burden for couples with success rate of 10-20% per cycle. Hence this CME is conducted in order to educate gynecologists and lab personnel, also make them competent in management of male infertility and IUI
